Platinum Level Subscription

The **Platinum Level subscription** include everything in the regular subscription plus several benefits and extra content.

Platinum subscriptions include PDF copies of all books in the monthly Export Essentials reference series. In addition to all the information given to regular subscribers, these books include tables with supply-demand and trade data for Canadian red and green lentils, as well as green, yellow and split peas. More data will be added throughout the year.

Additional features, such as a searchable trade database, will be added in the coming year to the platinum user's website.

Platinum subscription benefits also include a **20% discount** on advertising in the Export Essentials reference series.

Annual subscriptions cost \$1,600 plus \$45 per additional user in your company.

The **regular subscription** gives users full access to the existing STAT website.

Regular subscribers can choose to have articles sent to them by email as they are added to the website. Subscribers can change their email preferences and the selection of commodity areas from which material is emailed. Articles are sent newswire style and include coverage of major USDA and Statistics Canada crop reports.

The STAT website includes monthly updated export trade data for Canada, Australia and the United States; a broad selection of supply and demand forecasts; and weekly update price graphs.

Annual subscriptions cost \$475 plus \$45 per additional user in your company.

Strategic Essential Useful

Export Essentials media kit

The Export Essentials reference book gives **decision-makers** in over 60 countries the data they need to review, update and develop corporate marketing and origination strategies. Export Essentials delivers detailed export trade data in a digestible format, along with proprietary supply and demand forecasts.

Over 1,000 copies are distributed to **key decision-makers and traders** in the international pulse, special crop and food industries. Several thousand copies are also distributed to **influential farmers** in western Canada as part of their marketing strategy.

Advertising in the Export Essentials reference book keeps your message in front of key decision-makers in the pulse and food industry longer than news publications. Trade data has a long life and stays **useful and relevant for months** after release.

2014 Advertising Schedule

Spring 2014
Free distribution to people attending
CICILS and India's Global Pulses Conclave
Advertising Closing
February 1, 2014

	Size (inches)	Rate
Back Cover (bleed size)	8.625 x 11.25	\$2,250.00
Full Page (trim size)	8.5 x 11	\$1,250.00
Half Page	8.5 x 6.5	\$675.00

Please provide press-quality advertising material. All images used must be a minimum of 300 dpi. The file can either be an image file such as a JPEG graphic or a press-ready PDF file. If supplying a PDF file, all images and spot colors must be converted to CMYK. All images must be 300 dpi resolution and all fonts must be included in the PDF. For other formats, please contact us directly.

Published rates are net rates and subject to change without notice. Advertising is non-cancellable after the closing date, with the exception of the back cover, which is non-cancellable.

There is a 20% surcharge for special placement requests. For example, specifying that your advertisement should face a specific supply and demand or export data table. Such space will be awarded on a first-come, first-served basis, with priority given to full page ads.

Agency commission: 15% discount

Introduction

There are many ways of telling stories. Words and pictures are the most common and easiest to understand. Our Export Essentials series tells stories with data. Unfortunately, not everyone can look at a table of numbers and see the buried stories. Working on the Export Essentials series and always thinking about how to make those stories visible has resulted in some changes to way we are showing data.

The main change is that in larger export tables, the top five destinations are shown at the top of the file. The table shows that subtotal and what percent they represent of total shipments. For most commodities, this makes it easier to focus on the key countries which have the biggest impact on demand. It is also much easier to see how demand from one country can plunge, yet be offset by increased demand from another. This makes it easier to understand overall market conditions, especially when change involve destinations where you do not normally do business.

There are usability problems with large sets of data. If the typeface is too small and data is shown as black ink on a white background, it is almost impossible to see what is happening without a ruler and something to hold the book flat. We choose a typeface and size that makes the number easy to read for most people. We replaced the ruler with color. Each row is highlighted with alternating light and darker colors. This makes it harder to lose your place when scanning across several columns of data. Another usability issue is the choice between showing the most important destinations first or keeping them in alphabetical order. It is easier to find a country in a long list if it is alphabetical. Countries are ordered alphabetically by region when there a lot of data, or just alphabetically when there is less data. This fits well with the decision to display the top five destinations when that makes it easier to focus on the most important destinations. The goal is to make it easier for busy people to use this book and to find needed information.

Quarterly Review

This edition of Export Essentials contains a review of the 2012 calendar year. Instead of showing trade data on a marketing year basis, it is quarterly by calendar year. No more than 20 destinations are shown in each table. These are the most important destinations during the fourth quarter of 2012.

This makes it much easier to see changes in demand dynamics. Scanning through the previous quarters often shows relative changes in the importance of major destinations. For example, scanning the table for all lentil exports from Canada shows that Turkey was the most important destination in the fourth quarter of 2011 and first quarter of 2012. But, India became the most important destination after the second quarter of 2012. Dig deeper and look at the individual tables for green and red lentil exports from Canada; India leaps out as the dominant buyer of red lentils during the last half of 2012, while the picture for green lentils is more mixed, with India being a big destination in the third quarter, while Spain was the most important in the fourth.

Comparing data from the quarterly tables with the marketing year tables tells more about how demand and trade has

evolved in recent months. The marketing year tables show how demand changes from one season to the next, as well as comparing the season to date totals for the current marketing year with the same period during the previous marketing year. This is especially true when looking at the top five destinations in the marketing year tables. Continuing with lentils as an example, Turkey is the most important destination during the 2010-11 and 2011-12 marketing years. But during the 2012-13 marketing year, shipments to Turkey fell sharply between August and January. However, the drop was more than made up for by soaring demand from India. Only by looking at the quarterly tables is it possible to see that it was during the second quarter of 2012 that everything changed.

Two things happened. The full impact of the economic crisis in the Middle East and Europe swept through pulse and specialty crop markets during the last quarter of 2011 and first quarter of 2012. That had a major impact on sales to Turkey and the United Arab Emirates. At the same time, however, problems with rabi season crops on the Indian subcontinent helped boost demand for all pulses to cover the shortfall. Those problems were compounded by a disappointing kharif crop. That combination of factors helped drive the shift in demand from the major buyers that took place in 2012.

It is often said that history informs the future. Seeing the changes that have taken place in quarterly trade flows throughout 2012, and thinking about the key events that happened during the year makes it easier to come up with a broad feeling for the effect current events will have on future trade patterns. Since agriculture is one of the most dynamic industries in the world, it is more important to anticipate what could happen by drawing on past experience. This edition's review of 2012 combines nicely with the regular marketing year tables to help you find your way through the coming weeks of rapidly changing market fundamentals.

INDIA PULSES AND GRAINS ASSOCIATION

- THE APEX BODY OF PULSES TRADE IN INDIA.
- OVER 270 MEMBERS INCLUDING ASSOCIATIONS FROM ACROSS INDIA.
- PAN - INDIA REACH OF CLOSE TO 10,000 STAKEHOLDERS, REPRESENTING A CROSS SECTION OF THE SUPPLY CHAIN.
- ENJOYS THE SUPPORT OF :
 - THE GOVERNMENT OF INDIA - MINISTRY OF CONSUMER AFFAIRS,
 - FOOD AND PUBLIC DISTRIBUTION - DEPARTMENT OF CONSUMER AFFAIRS,
 - NATIONAL ASSOCIATES AND
 - CICILS - IPTIC.
- ADDRESSES ISSUES FACED BY THE INDUSTRY AND TRADE WHICH INCLUDE INPUT MANAGEMENT, IMPROVED AGRONOMIC PRACTICES, LOGISTICS (SCIENTIFIC STORAGE AND MOVEMENT), PROCUREMENT POLICY AND INCLUSION OF PULSES IN PUBLIC DISTRIBUTION SYSTEM (PDS).
- PROVIDES POLICY INPUTS AND STRATEGIC ADVICE TO THE GOVERNMENT AS WELL AS AGRI-BUSINESSES.
- ASSISTS IN POLICY MAKING.
- SUPPORTS RESEARCH AT EVERY LEVEL.
- MONITORS FOREIGN TRADE IN PULSES & GRAINS AS WELL AS PROVIDES EFFECTIVE FORWARD-LOOKING GUIDANCE TO THE TRADE AND POLICY MAKERS.
- IS THE BRIDGE THAT CONNECTS INDIAN STAKEHOLDERS WITH THE INTERNATIONAL TRADING COMMUNITY.

Beans

Dry edible bean prices have maintained their values throughout the first quarter of the 2013 calendar year, helped by delays seeding this year's white alubia and black bean crops in Argentina. Global output is expected to approach 21.22 million metric tons in 2012-13, down almost two million from production during the previous two marketing years. Production is not expected to increase in 2013-14. This is keeping available supplies of beans fairly well balanced with consumption needs.

Total per capita consumption is expected to come in at 3.03 kilograms per human being in 2012-13, compared to 3.409 last season and the recent average of 3.235 kilograms.

The livestock feed sector is not keen about using edible beans, the implication being that dry edible bean consumption is not very price elastic. Though high prices work to constrain consumption, low prices do not tend to stimulate new uses. Supplies in North America Free Trade Agreement (NAFTA) region are expected to be little changed in 2013-14 because of a forecast increase in ending stocks. This reflects easing demand from Mexico now that production in that country has recovered.

World Dry Bean Production Summary

BASED on information from the Mexico's Department of Agriculture and USDA

中国食品土畜进出口商会

**China Chamber of Commerce of
Foodstuffs and Native Produce**

China Chamber of Commerce of Foodstuffs and Native Produce (CFNA) was established in September 1988. The membership of CFNA has exceeded 5500 companies, is composed of government enterprise, private enterprise, foreign enterprise, sino-foreign joint venture, trading company and process factory.

CFNA has 12 departments, an International Agricultural Trade magazine, and Beijing Jinsui Exhibition Center. Our staffs are good at economics and foreign languages. They have good knowledge of the commodities, the market and the industry. They keep close contact with the government and member companies. They devote themselves to promoting the production and trade of member companies.

CFNA holds China Pulse Imp & Exp Industry Conference (CPIEC) every year, which attracts more than 250 delegates from home and abroad. 2013 Conference will be held from 26 – 28 Aug in Harbin City Heilongjiang Province in China. The new CPIEC focuses on China pulse industry situation & global pulse production and market, it is a great opportunity to learn about world pulse industry situation in the second half of this year. CFNA hereby sincerely invites you to join us.

Harbin is political, economic and cultural center of the north of Northeast China, the capital city of Heilongjiang Province which is the main pulse production area in China. 2013 CPIEC location is Shangri-La hotel, the address is 555 You Yi Road, Harbin 150018, China

Lentils

Lentil markets are ending the first quarter of the 2013 calendar year on a firm note as strong demand for red lentils from India has removed surplus stocks from Canada and other export origins. Markets for green lentils have also advanced, but the spread between red and green lentils has narrowed considerably since the start of the marketing year. Looking at only Canadian origin product, the premium for No 1 grade large green lentils versus whole red lentils has dropped from an average U.S. \$205 per metric ton across the entire 2011-12 marketing year to \$77 for the August through March period and sometimes as little as \$5 in February and March.

While global lentil production has been trending lower since peaking at 4.7 million metric tons in 2010, available supplies have been well above world consumption levels since that time. As a result, the stocks to use ration has been unusually high. The outlook for the current marketing year has improved significantly as the depth of demand has become clearer, with the result the stocks to use ratio on international markets could finish the 2012-13 marketing year at a more reasonable 13%. This will likely moderate the decline in world lentil production, suggesting that the stocks to use ratio could drop below 9% by the close of the 2013-14 marketing campaign. In Canada, which is the world's largest lentil exporter, this is expected to see red lentil area increase while green declines.

Total per capita consumption is expected to reach 0.544 kilograms per human being in 2013-14, compared to 0.544 this season and the recent five-year average of 0.573 kilograms. It is worth noting that year to year changes in usage are caused more by a lack of supply and than an abundance. The implication is that lentil consumption is not very price elastic and does not increase during periods of low price. This is an important observation because it means that the only solution for over-supply is a reduction in world production levels.

Returns from growing lentils are not competitive with grains and oilseeds in most countries. Land in the pulse will therefore drop in 2013, helping bring supplies more closely in line with consumption. Whether this results in higher average prices in 2013-14 is uncertain. However, the return of residual supplies to more reasonable levels suggests prices will recover enough in the coming season to pull land back into the crop in 2014.

CANADIAN SPECIAL CROPS ASSOCIATION

New Members and Partners Welcome

The CSCA currently has more than 130 members and partners, ranging from large multi-national organizations to single-plant processors. Why? Because the CSCA offers a range of services in relation to market access, transportation and market development for the entire value chain, from production through processing. With expertise and knowledge in transportation, market access, crop protection as well as nutrition, health, sustainability, processing and utilization, the CSCA consistently delivers results.

Join Today.

Discover the rewards of CSCA membership and partnership at www.specialcrops.mb.ca, or call 1-204-925-3780.

Working together with the CSCA, members and partners have greater influence on areas of interest to the industry.

Peas

International field pea markets maintained their firm tone through first quarter of 2013. Most of the strength was in green peas, which remain in fundamentally short supply. This provided some substitution support for yellow peas, which seemed to be developing their own momentum as the quarter draws to a close. While global pea area is expected to be up over last year, there is a risk that land in yellow peas could decline in favor of green. Moreover, there is an underlying concern that cross-commodity competition is going to be a bigger factor than was expected a couple of months ago.

Farmers continue to be paid more for green peas than they are for lentils and some classes of dry edible beans. In countries which mainly buy green peas, importers are surprised to pay a premium for peas over lentils. Normally, both green and yellow peas are discounted to Number 2 grade large green lentils. In markets which mainly buy yellow peas, both red and green lentils are more expensive. This is probably contributing to India's unusually strong demand for whole red lentils.

For the coming marketing year, global per capita consumption is expected to come in at 1.454 kilograms per human being, compared to an estimated 1.441 this season and a revised 1.455 kilograms in 2011-12. The drop in per capita consumption experienced in 2012-13 is a direct result of the lower available supply. The increase in the coming year reflects a moderate improvement in available supplies.

Prices are at levels which should keep farmers interested in growing peas in 2013. This should see an increase in seeded area in Canada. On the other hand, land in peas could slip in other parts of the world in the face of competition from other crops. If area is similar and yields are at their recent five-year average, world pea production will rise. Rising production in net-exporting countries will also result in an increase in world trading volumes, though prices should be lower on average in 2013-14.

World Pea Supply and Demand Situation

Chickpeas

International chickpea markets remained mixed in terms of prices. Kabulis had shown a softer undertone in the face of harvest selling pressure from India, but this did not affect asking prices for other origins, encouraging India's exporters to be less aggressive on pricing. Desi-type chickpeas have held steady, helped by Australia's ability to clear surplus production immediately after harvest. In the October through January period, Australia exported 78% of its available supply of chickpeas, compared to 34% during the same period the previous marketing year. This should once again see Australia sellout of product before the coming harvest.

Global output is expected to approach 11 million metric tons in 2013-14, up 56,000 from this season to set a new record. Even so, available supplies of all classes of chickpeas is expected to remain closely matched with demand, keeping the stocks to use ratio under 3% or around 10 days supply.

Total per capita consumption is expected to come in at 1.534 kilograms per human being, but down from this season's forecasted 1.545 kilograms. Consumption levels are slightly ahead of the previous five-year average of 1.432 kilograms per capita.

Desi are the mostly widely grown type of chickpea in the world. India is the world's largest producer, consumer and importer of this class of chickpea. Australia is the biggest export producer. Demand is price elastic because the primary consumers of this type of chickpea are still not eating as many as they desire or need. Moreover, a fraction of the demand in this sector moves back and forth with yellow peas and other pulses depending on price and availability.

World desi production is expected to reach 9.18 million metric tons in 2013-14, up 9,000 from last season and 631,000 metric tons above the recent five-year average. Global per capita consumption will likely end up around 1.281 kilograms per person, down from 1.302 this season but above the recent average of 1.255 kilograms.

Kabulis are the Cadillac of chickpeas. India is the biggest exporter producer of this class of chickpea, but Mexico still sets the overall price tone because it sets the standard for quality, against which all other origins are typically discounted. World production is expected to reach 1.8 million metric tons in 2013-14, up from an estimated 1.76 million this season and above the recent five-year average harvest of 1.53 million metric tons. Per capita consumption is expected to reach 0.253 kilograms in 2013-14, up from 0.243 in 2012-13 and above the recent average of 0.224 kilograms per capita.

Strategic Essential Useful

Export Essentials media kit

The Export Essentials reference book gives **decision-makers in over 60 countries** the data they need to review, update and develop corporate marketing and origination strategies. Export Essentials delivers detailed export trade data in a digestible format, along with proprietary supply and demand forecasts.

Over 1,000 copies are distributed to **key decision-makers and traders** in the international pulse, special crop and food industries. Several thousand copies are also distributed to **influential farmers** in western Canada as part of their marketing strategy.

Advertising in the Export Essentials reference book keeps your message in front of key decision-makers in the pulse and food industry longer than news publications. Trade data has a long life and stays **useful and relevant for months** after release.

2014 Advertising Schedule

Spring 2014
Free distribution to people attending
CICILS and India's Global Pulses Conclave
Advertising Closing
February 1, 2014

	Size (inches)	Rate
Back Cover (bleed size)	8.625 x 11.25	\$2,250.00
Full Page (trim size)	8.5 x 11	\$1,250.00
Half Page	8.5 x 6.5	\$675.00

Please provide press-quality advertising material. All images used must be a minimum of 300 dpi. The file can either be an image file such as a JPEG graphic or a press-ready PDF file. If supplying a PDF file, all images and spot colors must be converted to CMYK. All images must be 300 dpi resolution and all fonts must be included in the PDF. For other formats, please contact us directly.

Published rates are net rates and subject to change without notice. Advertising is non-cancellable after the closing date, with the exception of the back cover, which is non-cancellable.

There is a 20% surcharge for special placement requests. For example, specifying that your advertisement should face a specific supply and demand or export data table. Such space will be awarded on a first-come, first-served basis, with priority given to full page ads.

Agency commission: 15% discount

Birdseeds

Birdseed ingredient markets maintained their strong tone into the first quarter of 2013, with white proso millet seed setting and resetting new record high trading levels as the season progresses. Most of the millet used for birdseed is grown in North America, with production in other parts of the world mainly used as food. Strength in millet reflects the combined impact of a downtrend in production for birdseed and a steep decline in the 2012 harvest caused by drought. Production in the United States fell from 261,612 metric tons in 2010 to 207,498 in 2011, and just 70,080 metric tons in 2012.

Canadian canaryseed markets continue to be helped by the overall strength in the birdseed complex. A small fraction of demand can migrate between millet and canaryseed depending on price and availability. This season, the price relationship favors canaryseed. Unfortunately, there was no evidence of an improvement in canaryseed demand during the first half of the 2012-13 marketing year. Despite unrealistic phytosanitary standards, Canadian canaryseed exports to Mexico were up 69% during the first half of the marketing year. Mexico regained its status as the most important destination for Canadian canaryseed.

Pessimism about canaryseed market prospects is expected to continue to affect interest in planting the crop, with the result Canadian area and production is expected to be little changed in 2013. By contrast, the price performance of millet should contribute to increased interest in the crop, while relief from drought in many parts of the United States has markets optimistic yields will be closer to average in most growing areas. That combination should result in price relief for birdseed packagers.

Oilseed

Over the past 20 years in Canada, it is not an exaggeration to say that all of the expansion in canola and pulses came at the expense of wheat and summerfallow. The amount of land left summerfallow in Canada has dropped by an average 6.5 million acres per year over the past quarter century. Over the same period, wheat acreage in Canada plunged from an annual average of 34 million to 23.1 million acres. By contrast, land in canola went from an average 7.3 million to 18.1 million acres, and land in pulses jumped from an annual average of 820,000 to 6.3 million acres.

Canada's seeding intentions report was released at the end of April, one month after the USDA's seeding intentions estimates. In both cases, the seeding intentions include both final decisions for some parcels of land and a question, phrased as an intention, about what should be seeded on the remaining land. They are looking to see how prices react to those thoughts before making their decision.

Heading into the Canadian seeding intentions report, Agriculture Canada predicts total wheat acreage will be up 6% at around 25.3 million acres or 10.25 million hectares. It was also expecting canola area to drop slightly, slipping just over 1% to 21.25 million acres or 8.6 million hectares. By the middle of March, some market participants were beginning to think canola area could actually increase again this year in response to a solid performance by markets, both in terms of price and movement. The most closely watched oilseed is not canola, but soybeans. Agriculture Canada thinks seeded area in Manitoba and Ontario could jump 15% to 4.79 million acres or 1.94 million hectares. Land in Saskatchewan is also expected to be up sharply this year. Area should soon be large and consistent enough that Statistics Canada will start to include estimates of seeded area and production for Saskatchewan. Some market participants think area will reach 250,000 acres this year, with the potential for Saskatchewan to surpass Manitoba in the future. This has raised fears that soybeans will displace other pulses.

Some migration has clearly taken place in Manitoba, especially from dry edible beans. In 2001, Manitoba planted 50,000 acres of soybeans and 405,000 acres of pulses. By 2005, land in soybeans had doubled to 100,000 and land in pulses contracted to 335,000 acres. By 2010, land in soybeans had jumped to 520,000 acres and land in pulses dropped to 215,000. Last year, farmers in Manitoba planted 850,000 acres of soybeans and only 160,000 acres of pulses. This year, land in soybeans is expected to exceed one million acres, while land in other pulses drops on account of a reduction in dry edible beans. The expansion of soybeans has had no impact on the growth of canola acreage in Manitoba. It rose from 1.9 million acres in 2001 to 3.55 million this year.

This makes it clear that markets cannot count on farmers in Saskatchewan to keep growing as much or increase overall production of pulses and other specialty crops. The rewards need to be there.

Canola is the biggest challenge. Average returns from canola have been consistently higher than mustard, canaryseed, field peas and lentils. Kabuli chickpeas are the only pulse which consistently outperforms canola on a gross income basis. Canola has spread across Saskatchewan, but farmers are discovering the oilseed is not suited to all parts of Saskatchewan. This is part of what makes short season soybeans attractive to Saskatchewan farmers.

Most of the soybeans grown in Manitoba are 2350 to 2650 heat unit beans with both dark and yellow (white) hilums. There are only a few pockets in Saskatchewan where they can be grown. Varieties which are good at 2100 heat units would greatly expand the potential area to a between Estevan and Weyburn in the southeast, around Moose Jaw and in a triangle west of Moose Jaw, north of Swift Current, south of Saskatoon and extending south of Kindersley to the Alberta border. More often than not, the rest of Saskatchewan, including the southwest, are too cold for soybeans. If 2100 heat unit soybeans were available, soybeans would give southern Saskatchewan a viable oilseed. Until then, success in one year will likely be followed by many failures.

With wheat and durum now open market crops, they have moved from being necessary parts of crop rotations to being bona fide cash crops. The implication is that pulses and other specialty crops need to generate competitive returns to avoid losing land. Unlike canola or soybean, wheat can be grown across all of Saskatchewan, making it a potent competitor in all crop districts.

BASED on USDA data. 2012 forecasts for mustard, safflower, rapeseed and flaxseed by STAT Market Research.
Break down of total sunflower production by class by STAT based on USDA aggregate estimate.

Foods and Spices

Markets for specialty crops mainly used by the snack and condiment sector finished the first quarter of the 2012 calendar year on a mixed note. Strong differences of opinion are evident in popcorn markets, with processors in Argentina pressing for sales, while their counterparts in the United States remain fiercely bullish in the face of drought-reduced harvest there. Export asking prices in Argentina have dropped sharply from the record highs set during the closing quarter of 2012.

Confectionary sunflower markets remain steady with available supplies remaining just behind the short term needs of packagers and processors. Mustard seed maintained a relatively quite tone, with prices holding at the upper end of their historic price range, but far below their record highs.

The varying performances should have a direct impact on grower interest in the crops in 2013. Popcorn is clearly priced at levels which should attract more land to the crop in the United States in the spring. The impact that rising U.S. production has on world markets in 2013 will go a long way to determining the amount of increase which will be seen next year in Argentina.

Confection sunflower prices are at levels which should attract more land to the crop in 2013. Mustard seed values are also at the upper end of their historic price range, though they are well below the crop's record highs. This should result in a modest increase in plantings in the coming year, with production in North America likely to stay at levels which will help reduce surpluses accumulated in previous years.

Mustard Seed

Other Specialty Crops

Minor specialty crops such as buckwheat are very much niche crops in North America, though they are still important in parts of central Europe and Asia. Despite greater consumer awareness of the health benefits of consuming buckwheat, demand is growing at a relatively slow pace. This is unlikely to change until buckwheat flour finds its way into more food ingredients.

Lupins are both a niche crop and a well known livestock food ingredient. *Angustifolius* are the most widely grown and target the livestock feed industry. Australia is a major producer of this type, but production has been declining in recent years in favor of other livestock feed ingredients and more valuable pulses. Land in *Angustifolius* lupins averaged 821,700 hectares between 2001 and 2005, but only 444,082 hectares between 2008 and 2012.

Albus lupins are also grown in Australia. It is grown in other parts of the world, but production break downs are not available. Unlike the other type of lupin, *Albus* lupin production is trending upward in Australia. Seeded area averaged 18,700 hectares between 2001 and 2005, compared to 38,770 hectares between 2008 and 2012.

Platinum Level Subscription

The **Platinum Level subscription** include everything in the regular subscription plus several benefits and extra content.

Platinum subscriptions include PDF copies of all books in the monthly Export Essentials reference series. In addition to all the information given to regular subscribers, these books include tables with supply-demand and trade data for Canadian red and green lentils, as well as green, yellow and split peas. More data will be added throughout the year.

Additional features, such as a searchable trade database, will be added in the coming year to the platinum user's website.

Platinum subscription benefits also include a **20% discount** on advertising in the Export Essentials reference series.

Annual subscriptions cost \$1,600 plus \$45 per additional user in your company.

The **regular subscription** gives users full access to the existing STAT website.

Regular subscribers can choose to have articles sent to them by email as they are added to the website. Subscribers can change their email preferences and the selection of commodity areas from which material is emailed. Articles are sent newswire style and include coverage of major USDA and Statistics Canada crop reports.

The STAT website includes monthly updated export trade data for Canada, Australia and the United States; a broad selection of supply and demand forecasts; and weekly update price graphs.

Annual subscriptions cost \$475 plus \$45 per additional user in your company.

Strategic Essential Useful

Export Essentials media kit

The Export Essentials reference book gives **decision-makers** in over 60 countries the data they need to review, update and develop corporate marketing and origination strategies. Export Essentials delivers detailed export trade data in a digestible format, along with proprietary supply and demand forecasts.

Over 1,000 copies are distributed to **key decision-makers and traders** in the international pulse, special crop and food industries. Several thousand copies are also distributed to **influential farmers** in western Canada as part of their marketing strategy.

Advertising in the Export Essentials reference book keeps your message in front of key decision-makers in the pulse and food industry longer than news publications. Trade data has a long life and stays **useful and relevant for months** after release.

2014 Advertising Schedule

Spring 2014
Free distribution to people attending
CICILS and India's Global Pulses Conclave
Advertising Closing
February 1, 2014

	Size (inches)	Rate
Back Cover (bleed size)	8.625 x 11.25	\$2,250.00
Full Page (trim size)	8.5 x 11	\$1,250.00
Half Page	8.5 x 6.5	\$675.00

Please provide press-quality advertising material. All images used must be a minimum of 300 dpi. The file can either be an image file such as a JPEG graphic or a press-ready PDF file. If supplying a PDF file, all images and spot colors must be converted to CMYK. All images must be 300 dpi resolution and all fonts must be included in the PDF. For other formats, please contact us directly.

Published rates are net rates and subject to change without notice. Advertising is non-cancellable after the closing date, with the exception of the back cover, which is non-cancellable.

There is a 20% surcharge for special placement requests. For example, specifying that your advertisement should face a specific supply and demand or export data table. Such space will be awarded on a first-come, first-served basis, with priority given to full page ads.

Agency commission: 15% discount

There are many ways of telling stories. Words and pictures are the most common and easiest to understand. Export Essentials tells stories with data.

This edition looks at export trade from North America and Australia on a quarterly basis for 2012 and on a marketing year basis since 2010, as well as supply and demand forecasts for the coming 2013-14 marketing year.

History informs the future. Seeing the changes that have taken place in quarterly trade throughout 2012 makes it easier to predict the future. Since agriculture is one of the most dynamic industries in the world, it is more important to anticipate what could happen by drawing on past experience.

This edition's review of 2012 combines nicely with the regular marketing year tables to help you find your way through the coming weeks of rapidly changing market fundamentals.
